

Sanitize with effectiveness and consistency with automated UV-Clean solution

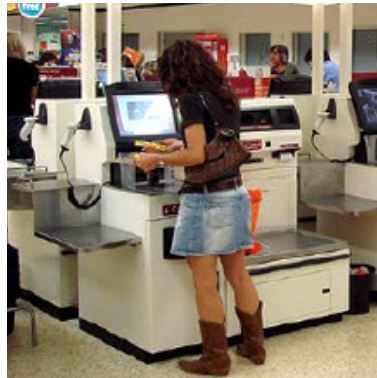

With disease transmission top of mind during the COVID-19 outbreak, ensuring sanitized surfaces is a priority for retailers and food service. However, the practice of wiping down surfaces with cleaning agents is both expensive and time consuming, while effectiveness depends on the diligence of the cleaner.

UV-Clean offers a turnkey solution for automated sanitation of high-touch surfaces like touchscreens, kiosks and pinpads. Affordable and easy to install, this solution provides consistent and effective sanitation for customer and employee safety.

HOW IT WORKS

UV-Clean technology uses UV-C nonvisible light that inactivates bacteria and viruses at the cellular level, preventing them from multiplying and causing infection. Using automated, motion-activated technology, UV-Clean sanitizes key surfaces once they have been touched. Proven to eliminate traces of Coronavirus, which can live on surfaces for days, UV-Clean is an effective, safe and efficient way to provide regular sanitation in high traffic environments. Save time and money while supporting rigorous cleaning protocols with UV-Clean.

USE UV-CLEAN TO SANITIZE HIGH-TOUCH SURFACES INCLUDING:

- Payment terminals
- Self-checkout
- Customer service kiosks
- Customer facing screens
- Employee time clocks
- Pharmacy counters
- Touchscreens

Telaid can handle your multi-site technology deployments.
