

Access Ruckus Wi-Fi 6 as a service from Telaid

Dependable Wi-Fi is an expectation among managers, employees and customers. It's essential to your business operations and customer service, but not necessarily easy to provide. Increasing density, high-bandwidth applications and growing demand strain Wi-Fi networks, compromising speed and performance.

Ruckus Wi-Fi 6 raises the bar on performance and capacity for mobile users, IoT devices, and latency-sensitive applications. Using its patented BeamFlex technology, Ruckus sends signals based on the requirement, enabling more efficient broadband sharing. Telaid now offers Ruckus WiFi 6 as a service, enabling quick and easy access to customers without a significant capital investment.

System Features

Ruckus Wi-Fi leverages innovative technology to deliver superior performance in the most challenging environments thanks to unique, patented functionality available on no other brand.

- BeamFlex features the first-of-its-kind smart antenna technology that maximizes signal coverage
- Maximizes throughput (Data to the user)
- Increases network capacity (More devices and connect is a single access point)
- Efficient band steering (High quality signal directly to a user rather than an unused area)
- Ruckus Wi-Fi 6 takes a dynamic channel management approach, automatically changing an AP's channel when interference occurs.
- Fewer AP's reach farther while delivering more reliable client connectivity

Enjoy faster, more efficient network performance

Dependable

Improved network performance with increased speed and dependability.

Cost Effective

Cost effective solution available as a service and includes some maintenance.

Scalable

Supports additional growth as you continue to deploy more wireless devices.

Turnkey

Telaid can deploy and monitor the solution for one easy monthly payment – no capital expense required.

Packaging and Prices

Telaid is offering Ruckus Wi-Fi 6 as a service, available for a per-month fee that includes deployment, ongoing monitoring and cellular service, and required hardware. Custom configurations may be added for an additional fee. Contact us to request pricing.

Items included in monthly fee
1 – 12p Switch
2 – Indoor APs
2 – 2:2 streams (2.4 GHz / 5GHz)
1 – 250 ft. Cable
Cat 6 Plenum
1 – 5hrs labor for 2 Techs
1 – 4g Router
Non-cellular available
If modem is already available
1 – Unlimited cell service
1 – Managed service**

**Managed service includes ongoing monitoring. Additional service calls are not included.

Items available for additional fee
Additional indoor access points - 2x2:2 streams
Outdoor access points
Lift
Managed service for extra access points
